

Altered microRNA and target gene expression related to Tetralogy of Fallot

Marcel Grunert, Sandra Appelt, Ilona Dunkel, Felix Berger & Silke R. Sperling

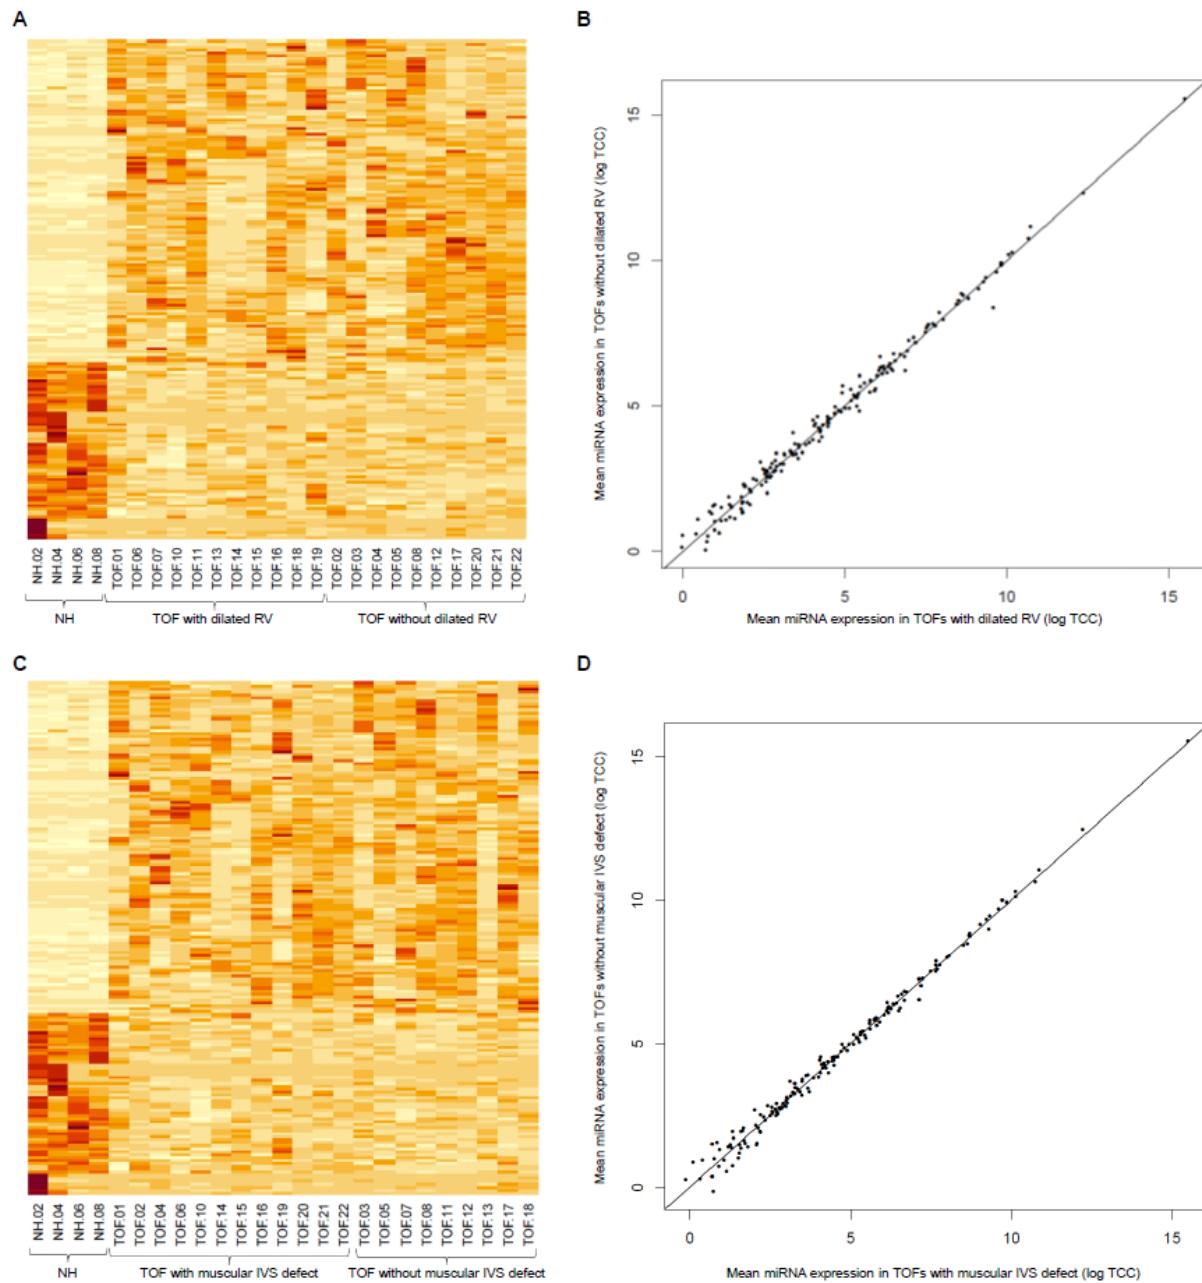

Supplementary Information

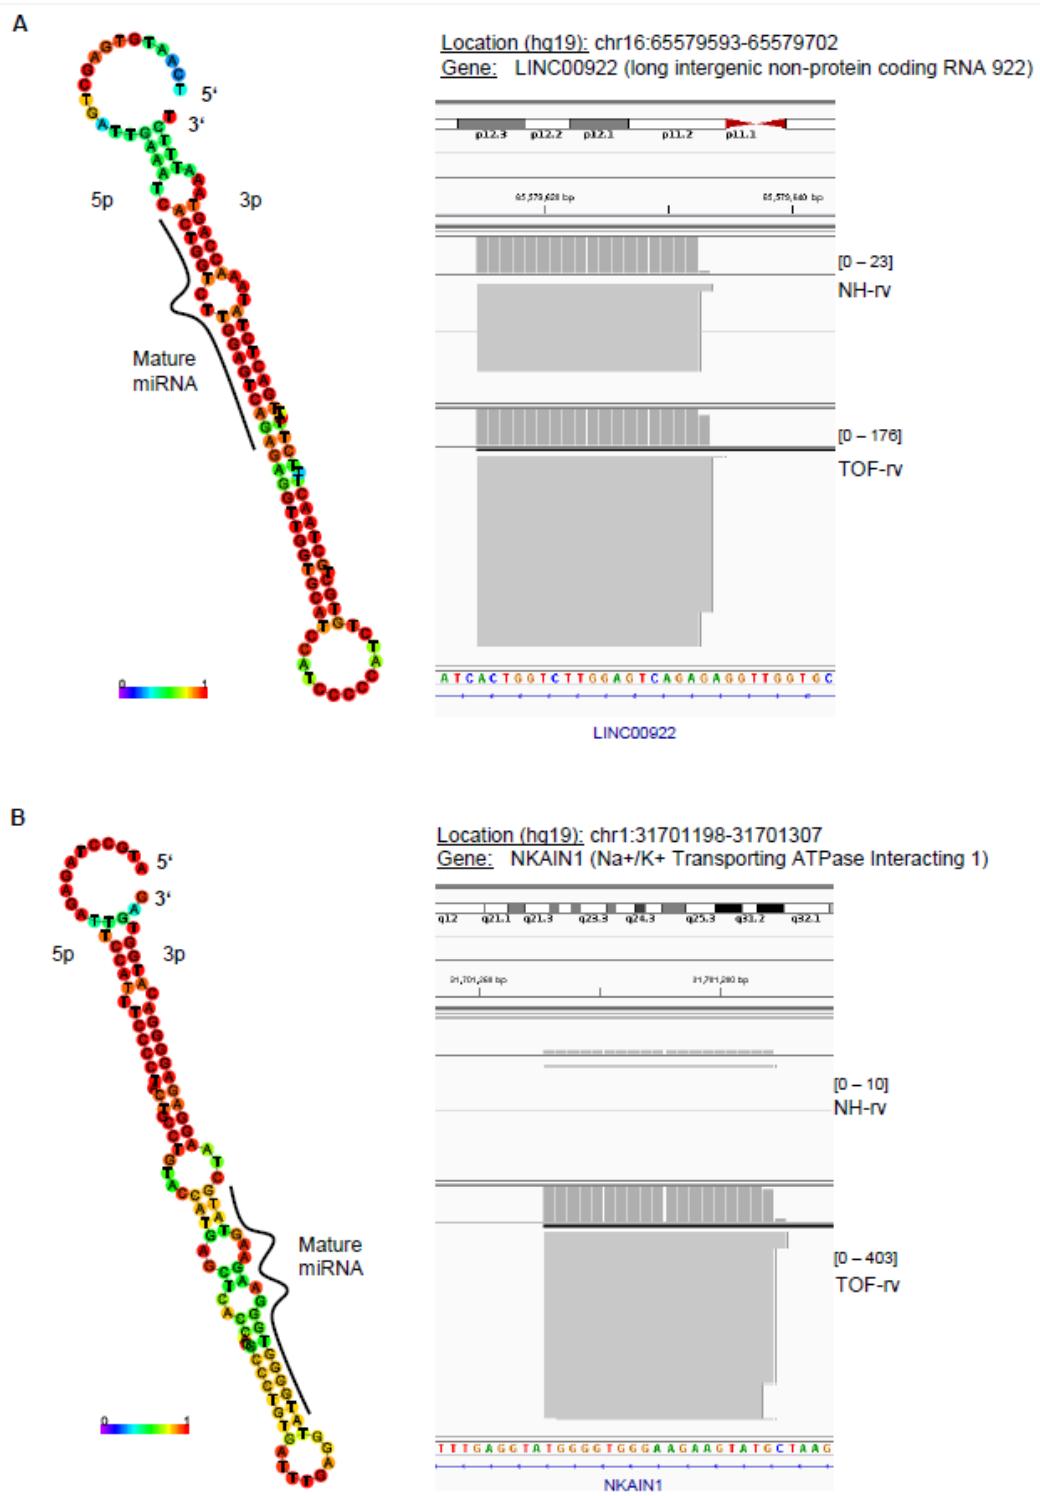

Supplementary Figure S1. Phenotype matrix for TOF patients and normal heart controls. Each individual is represented by one column. In addition to general information, all pathological features are indicated. Double boxes are used for more than one piece of information per row. See legend for color-coding. The samples NH-01, NH-03, NH-05 and NH-07 were taken from left ventricle whereas all other normal heart and TOF samples were taken from right ventricle. ECG indicates electrocardiogram; IAS, intra-atrial septum; IVS, intra-ventricular septum; LA, left atrium; LV, left ventricle; NH, normal heart; PFO, patent foramen ovale; Pmean, mean pressure; Psystolic, systolic pressure; PV, pulmonary valve; RA, right atrium; RV, right ventricle; TOF, Tetralogy of Fallot.

Supplementary Figure S2. Read length distribution over all TOF-rv, NH-lv and NH-rv samples of (A) all mapped sequences and (B) mapped mature miRNA sequences. nt: nucleotides.

Supplementary Fig. S3: Expression of significantly differentially expressed miRNAs (n=172; TOF-rv vs. NH-rv) in TOFs with and without dilated RV or muscular IVS defect. (A+C): Heatmap based on hierarchical clustering of identified miRNAs (TCC normalized expression values) among the different groups of samples/individuals. (B+D): MiRNA correlation of expression values in the two groups of patients. IVS: intra-ventricular septum; NH: normal heart (samples from right ventricle); RV: right ventricle; TOF: Tetralogy of Fallot (samples from right ventricle).

Supplementary Figure S4. Predicted novel miRNA candidates. (A) Novel miRNA located at chromosome 16 and overlapping the long non-coding RNA LINC00922. (B) Novel miRNA located at chromosome 1 and in an intron of NKAIN1. (Left) Centroid secondary structure drawing encoding base-pair probabilities based on RNAfold WebServer. (Right) Graphical representation of the novel miRNA location with read count over all NH-rv and TOF-rv samples.
