

Supplementary figure 4: Numbers from motion scores and visual function in neuromyelitis optica spectrum disorders after exclusion of NFM below 50

Association of NFM scores with functional and structural visual parameters in the neuromyelitis optica spectrum disorders cohort after exclusion of NFM scores below 50. A) high contrast visual acuity (HCVA), B) low contrast letter acuity (LCLA), C) peripapillary retinal nerve fibre layer (pRNFL) thickness, D) ganglion cell/inner plexiform layer (GCIP) volume; E) INL: inner nuclear layer (INL) volume, F) P100 latency; Red points represent optic neuritis eyes, turquoise points non-optic neuritis eyes.
