

Fig. S7

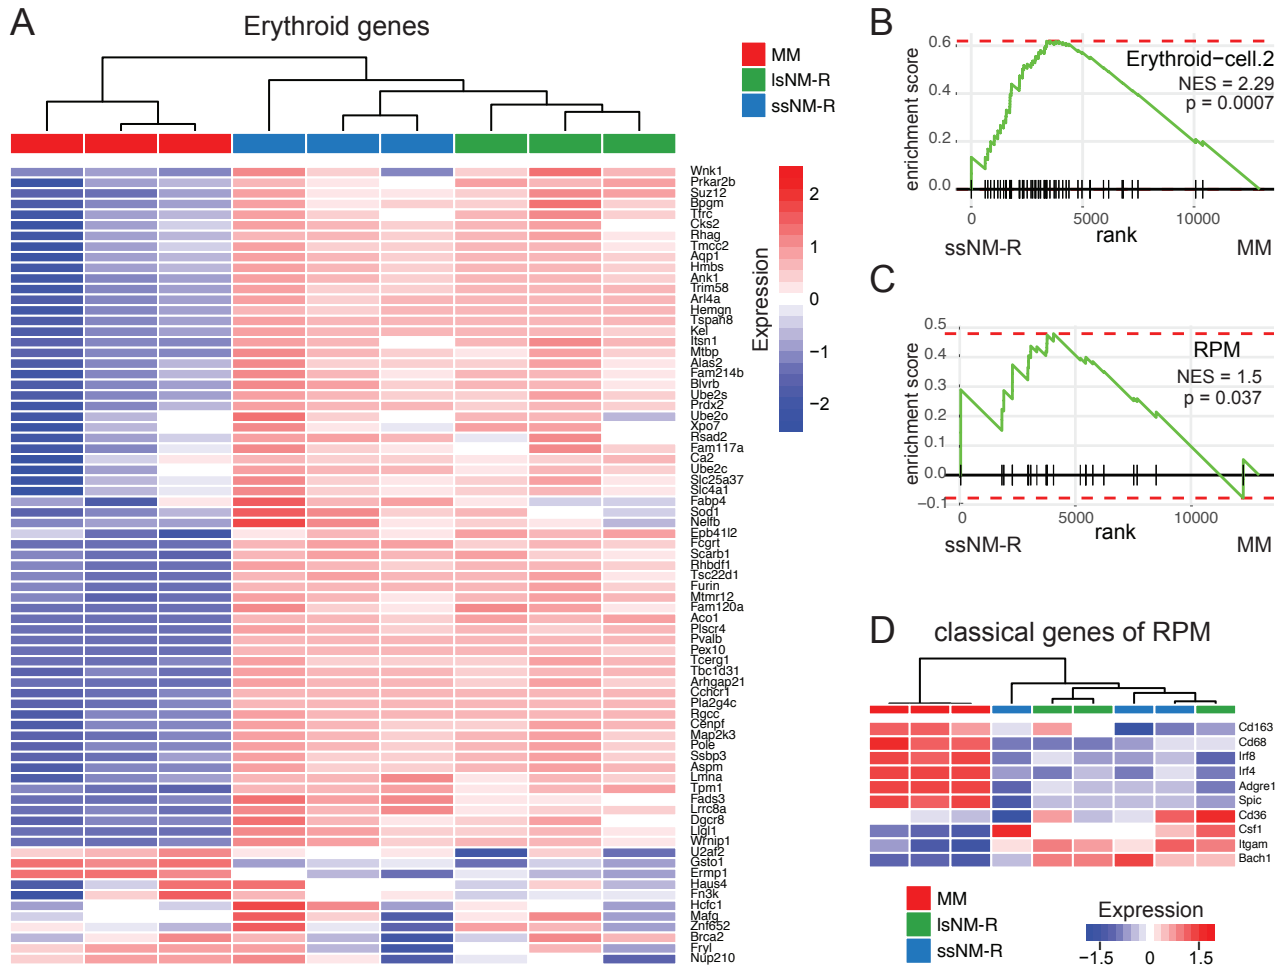

Fig. S7: Extramedullary erythropoiesis occurs in the spleen of ssNM-R and lsNM-Rs.

(A) Heatmap of erythroid genes in the spleen of mouse, ssNM-R and lsNM-R. **(B)** GSEA of erythroid gene sets from [2] and **(C)** of splenic red pulp macrophage (RPM) gene sets for ssNM-R spleen compared to mouse. **(D)** Heatmap of classical genes of mouse RPM that are mostly down-regulated in NM-R. For all RNA expression, heatmap and GSEA: $n = 3$ mice, $n = 3$ ssNM-Rs and $n = 3$ lsNM-Rs; MM: mouse (*Mus musculus*), NES: normalized enrichment score; p value is adjusted p value.
